Waste Classification Schemes

Country: AUSTRIA

Reporting Year: 2010

Waste Class Matrix: **IAEA Def.**

This country does use the IAEA Scheme: Yes

Description: The Agency's standard matrix

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
VLLW	100.0	0.0	0.0	0.0
LLW	0.0	100.0	0.0	0.0
ILW	0.0	0.0	100.0	0.0
HLW	0.0	0.0	0.0	100.0

Comment **# 12228: Waste Matrix IAEA Def.**

Effective from 1st January 2004, Nuclear Engineering Seibersdorf GmbH (NES) adopted the Commission Recommendation of 15 September 1999 on a classification system for solid radioactive waste 1999/669/EC, Euratom. This radioactive waste classification system is based on the IAEA classification scheme and has been accepted by the regulatory body; it is not defined in the present legislation (Chapter B5 of the JC Report 2008).

Definition of «unprocessed waste» and «processed waste»:

This country uses the IAEA standard definition:

	as-generated waste	processed for handling	processed for storage	processed for disposal
Inprocessed means:	x			
Processed means:		x	x	x

Groups Overview

Country: AUSTRIA

Reporting Year: 2010

Comment **# 20249: Reporting Group NES**

The informations are in line with the 3rd National Report on the implementation of the obligations of the Joint Convention on the Safety of Spent Fuel and on the Safety of Radioactive Waste Management October 2008

Comment **# 20255: Reporting Group NES**

New concept for future radioactive waste-management:

In compliance with the Joint Agreement between the Republic of Austria, Nuclear Engineering Seibersdorf GmbH and the Community of Seibersdorf, long-term interim storage ("transfer-storag") of radioactive waste has to be assured until 2030. This extension of the storage time for the existing (and future) radioactive waste requires significant investments in new buildings and machinery and additional measures for the stored containers with radioactive waste (additional and re-conditioning).

This renewal concept includes:

A Drum Drying system for 32 200-liter-drums. Intended purpose is the stabilization of the content to minimize/avoid corrosion.

New Manipulation Centre: An existing building will be extended to a New Manipulation Centre (NMC), where the following equipment will be installed:

Two Caissons (sorting/manipulation boxes) made of stainless steel: One caisson will be used for the additional- and re-conditioning works, the second caisson will be used for conditioning and decontamination of bulky materials.

A new, vertical High-Force-Compactor (1500 tons).

A new Hot Cell (with underground storage) to replace the existing Hot Cells at Seibersdorf,

A centre for manipulation of radiation sources.

Comment **# 20256: Reporting Group NES**

New Storage Concept

A new storage concept for the 200-litre-drums will be implemented: All drums will be stored horizontally in a way that will enable individual drum inspection during the whole time of storage.

Another new storage facility (no.14) for approx. 7.000 200-litre-drums will be installed, which is equipped similar to the new facility no.13 with heating and dehumidification-system. Later on the existing storage facilities no.12 and 12A will be refurbished in the same way. Storing the drums following the new concept (with possibility for individual inspection of each drum) will require more space compared to today's storing-practise. The future storage capacity at Nuclear Engineering Seibersdorf will be:

storage facilities no.12 and 12A: totally 4.600 drums

storage facility no.13: 2.900 drums

storage facility no.14: 10.000 drums

in total: 17.500 drums

Type:	Conditioning																
Year opened:	1995																
Comment	# 20250: Processing Facility Cement fac																
<p>Cementation (grouting) is a conditioning and immobilisation method which is currently in use. Homogeneous cementation is carried out in-drum or by mixing waste with cement and water in a separate mixer and filling the mixture into 200-litre-drums. This method is used rather seldom.</p> <p>Heterogeneous cementation is performed by placing 100-litre-drum with waste into 200-litredrums and filling the annular cavity with cement. Pellets from the high force compactor are also placed in 200-litre-drums. The voids are filled with quartz sand.</p>																	

Site (Structure) : NES

Country: AUSTRIA

Reporting Year: 2010

Facility:	Compactor		
Description:	Non burnable solid radioactive waste can be treated using the high-force compactor. Pellets formed in this way are transferred into 200-litre drums for storage. Depending on the waste characteristics, a volume reduction factor of 2 to 10 can be reached

Comment **# 20252: Storage Facility Interim**

All conditioned radioactive waste is stored within two dry engineered construction storage halls. At present the capacity is limited to 15000 200-litre-drums. A new storage facility is under construction. The capacity of this storage facility is approx. 2300 200-litre-drums. This storage facility is equipped with a thermal insulation and a heating- and dehumidification-system in order to reduce the risk of corrosion for the steel drums.

Inventory Reporting Date: December 2010

Waste Matrix Used: IAEA Def.

Comment # 12236: Site NES

The only radioactive waste management facility existing in Austria is the Nuclear Engineering Seibersdorf GmbH (NES), A-2444 Seibersdorf. NES is located at the site of the Austrian Research Centers Seibersdorf, south of Vienna.

Waste Inventory

Est=distribution is an estimate, Proc.=Is the waste processed (Yes/No)? RO=Reactor Operations, FF/FE=Fuel Fabrication/Fuel Enrichment, RP=Reprocessing, NA=Nuclear Applications,DF=Defence, DC/RE=Decommissioning/Remediation, ND=Not Determined

Note: where volume "as dispo" is provided, volume "as is" is used in the graph instead.

Waste Class: LLW

Waste Class Name	Location / Facility	Proc	Est.	Volume "as is" (m³)	Volume "as dispo" (m³)	RO %	FF/FE %	RP %	NA %	DF %	DC/RE %	ND %
LLW	Storage	Y	N	2171.300	2171.300	0.00	0.00	0.00	0.00	0.00	0.00	100.00

Comment # 22985:

VLLW is arising in Austria, but it is not collected and treated separately. Therefore, this waste stream is included in LLW.

Waste Class: ILW

Waste Class Name	Location / Facility	Proc	Est.	Volume "as is" (m³)	Volume "as dispo" (m³)	RO %	FF/FE %	RP %	NA %	DF %	DC/RE %	ND %
ILW	Storage	Y	N	61.600	61.600	0.00	0.00	0.00	0.00	0.00	0.00	100.00

Comment # 22986:

In the past, only some "special waste" was assigned as ILW (e. g. 226Ra-sources, which cannot be regarded as sealed sources). Now, waste with more than 400 Bq/g long lived alpha-isotopes is assigned as ILW. The data in the reports 2006 - 2008 were recalculated accordingly.

Name:	FMAFEWM
Full Name:	Federal Minister of Agriculture, Forestry, Environment and Water Management
Divison:	V/7 - Radiation Protection
City or Town:	Vienna
Main Website:	

Comment

17860: Regulator FMAFEWM

The Federal Minister of Agriculture, Forestry, Environment and Water Management is the competent licensing and supervisory authority with respect to radiation protection for the construction and operation of major nuclear facilities other than for medical use. This also includes the management of radioactive waste and the only waste management facility in Austria, NES. Thus, in the field of the safety of radioactive waste management, the regulatory body entrusted with the implementation of the legislative and regulatory framework is the Federal Minister of Agriculture, Forestry, Environment and Water Management.

Concerning the nuclear safety and the radiation protection in general, the competencies are divided between different authorities in Austria due to his federal and regional structure: The Federal Minister of Science and Research is the competent authority for the licensing of the construction and operation as well as for the inspection of university-based nuclear installations. The Federal Minister of the Interior is the competent authority for supervision of nuclear facilities with regard to physical protection and in charge of transport safety measures with regard to the carriage of nuclear materials. The Federal Minister of Economics and Labour is the competent authority for safeguards. The Federal Minister of Justice is responsible for all legal matters relating to the Nuclear Liability Act. The Federal Ministry of Health, Family and Youth is responsible for radiation matters in the medical field and with regard to foodstuff. The Heads of Governments of the Federal Provinces issue licenses according to the Environmental Impact Assessment Act. The locally competent Regional or District Authorities (99 districts in Austria) are the common radiation protection authorities and responsible for licensing and supervision according to the Radiation Protection Act.

Comment **# 20248: Regulation NORM**

The Austrian Radiation Protection Legislation defines waste that contains only naturally occurring radioactivity as radioactive waste if the exposure to the general public would exceed legally binding limits. If such material is declared as radioactive waste (i.e. if no further use is foreseen), it is subject to the same requirements as other radioactive waste.
