Waste Classification Schemes

Country: CANADA

Reporting Year: 2010

Waste Class Matrix: **IAEA Def.**

This country does use the IAEA Scheme: No

Description: The Agency's standard matrix

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
VLLW	100.0	0.0	0.0	0.0
LLW	0.0	100.0	0.0	0.0
ILW	0.0	0.0	100.0	0.0
HLW	0.0	0.0	0.0	100.0

Waste Classification Schemes

Country: CANADA

Reporting Year: 2010

Waste Class Matrix: **Canadian**

Yes

Description:

Radioactive waste is grouped into four categories: high-level radioactive waste, intermediate-level radioactive waste (ILW), low-level radioactive waste (LLW), and uranium mine and mill waste. The % cited are a first order estimate and will be updated in a future submission. Please refer to the comment that is included for this matrix.

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
HLW	0.0	0.0	0.0	100.0
ILW	0.0	0.0	100.0	0.0
LLW	0.0	100.0	0.0	0.0

Comment **# 20130: Waste Matrix CNSC/NRCan**

The classification of radioactive waste in Canada is described in the report "Canadian National Report for the Joint Convention on the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management", Third Report, October 2008 by the Government of Canada.

Comment **# 20139: Waste Matrix Canadian**

The Canadian Standards Association (CSA) - in collaboration with industry, government and the regulatory body - developed a standard that includes a radioactive waste classification system, CSA 293.3-08, which takes into account the IAEA Safety Guide DS-390, Radioactive Waste Classification, and the needs of the Canadian industry. The standard was published in March 2008. The radioactive waste-classification system described above recognizes four main classes of radioactive waste: high-level radioactive waste, intermediate-level radioactive waste (ILW), low-level radioactive waste (LLW), and uranium mine and mill waste.

Sub-classes for low-level wastes are also identified to provide better guidance on the appropriate waste management needs.

Attachment **#1011: Waste Matrix**

Inventory_Report_2004.pdf

Inventory of Radioactive Waste in Canada (2004)

This report presents the inventory of radioactive waste in Canada to the end of 2003. It provides a review on the production, accumulation and projections of radioactive waste in Canada.

Attachment **#1830: Waste Matrix**

English Inventory Report 2009.pdf

Inventory of Radioactive Waste in Canada (2009)

This report presents the inventory of radioactive waste in Canada to the end of 2007. It provides a review on the production, accumulation and projections of radioactive waste in Canada.

Attachment **#2321: Waste Matrix**

Final 2012 InventoryRadWaste (E).pdf

Inventory of Radioactive Waste in Canada (2012).

This report presents the inventory of radioactive waste in Canada to the end of 2010. It provides a review on the production, accumulation and projections of radioactive waste in Canada.

Definition of «unprocessed waste» and «processed waste»:

Waste Classification Schemes

Country: CANADA

Reporting Year: 2010

This country uses the following definitions:

	as-generated waste	processed for handling	processed for storage	processed for disposal
Unprocessed means:	x	x	x	
Processed means:				x

Groups Overview

Country: CANADA

Reporting Year: 2010

Reporting Group:	Historic
Inventory Reporting Date:	December 2010
Waste Matrix Used:	Canadian
Description:	This group summarizes historic LLW that was managed in the past in a manner no longer considered acceptable but for which the owner cannot reasonably be held responsible and for which the federal government has accepted responsibility.

Uranium Mining and Milling Waste - Tailings and Waste Rocks

Uranium Mill and Tailings waste data will be reported in the new version of the NEWDB when an option to report data in units other than "volume" will be made available. Current waste data is available in tonne of dry mass.

A list of closed, decommissioned and operational tailings/waste rock sites has been provided in this database for your information.

Site (Structure) : ChalkRiver

Country: CANADA

Reporting Year: 2010

Full Name: Chalk River Disposal Facility

Description: Near surface disposal – in the Canadian Joint Convention report declared as storage with surveillance facility, not disposal.

Bedrock at the CRL site is a complex of Precambrian granitic gneiss. The bedrock, which is much faulted and fractured, is overlain with compacted sandy glacial till, large volumes of sand, some gravel, clayey silts and recent organic bog deposits. The sandy zone, in which the waste management facilities/areas (WMA) are located, has a high hydraulic conductivity and is free draining. The Ottawa River is the major drainage feature in the area. The CRL site covers an area of 37 km², comprising four research reactors and numerous other research and development facilities, and the WMA, consisting of six large storage/disposal facilities.

Official Website:

License Holder(s): Atomic Energy of Canada Limited (AECL)

Comment # 26991: Institutional Framework

Atomic Energy of Canada Limited is the main organization responsible for R&D in radioactive waste management in Canada. Nuclear Waste Management Organization is the implementing organization for the management of high level waste and spent fuel in Canada. The waste generators, i.e. Ontario Power Generation, Hydro Quebec and New Brunswick Power, are responsible for the management and disposal of low and intermediate level waste from NPPs in Canada. The CNSC (Canadian Nuclear Safety Commission) is the responsible organization for all regulatory and licensing matters relating to radioactive waste management in Canada.

Waste management facilities that are located at this site:

Facility:	WMA D
Description:	Buildings and luggers
Detailed Facility Description:	<p>The facility consists of (a) trenches excavated in sand, (b) seepage pits, (c) concrete monoliths, (d) asphalt-lined trenches, (e) concrete bunkers, and (f) tile holes. The barriers are made up of concrete and asphalt.</p> <p>All facilities are located in dune sand and are at least 1 m above groundwater. The layout of the Waste Management Area (WMA) and of the whole CRL site is such that wide buffer zones are provided between the WMA and the laboratory workers or general public.</p>
Waste Packages:	<p>Various containers are used for packaging of waste in the WMA facilities, including metal drums and cans, plastic-wrapped bales, metal and wooden boxes, etc. Some liquid wastes are immobilized in cement. Specific details are not available.</p> <p>The types of waste managed at the WMA at CRL are very diverse in nature. The overall waste inventory consists of 80% low level waste, 15% intermediate level waste and 5% high level waste. The wastes arise from a variety of sources, which include research laboratories, hospitals, universities, radioisotope production, fuel fabrication, etc. The low level waste is generally contaminated trash, containing less than 4 GBq/m³ of fission and activation products. The intermediate level waste consists of spent ion exchange resins, spent sealed sources, incinerator ash, baled waste, etc, having more than 4 GBq/m³ of fission and activation products.</p> <p>The facility capacity is estimated to be 98,900 m³, and is effectively full to capacity as of 2001.</p>

Site (Structure) : ChalkRiver

Country: CANADA

Reporting Year: 2010

Facility Operation:	The site has been in operation since 1946. Recently, it has undergone a corrective action consisting of installation of surface caps above some of the older trenches and retrieval for processing and/or repackaging. Emplacement into disposal units started in 1946 and continued until 1979. The facility is now considered closed.
Financing:	Waste producers pay for waste management including disposal through provisioning in their accounts. Provisions are made in line with Canadian accounting standards.

Storage part of facility**WMA D**

Waste management facilities that are located at this site:

Facility:	BNPD- WWMF
Description:	Western Waste Management Facility (WWMF). The WWMF is owned and operated by OPG at the Bruce nuclear site and consists of 2 distinct areas: - a low- and intermediate-level radioactive waste storage area, and - a spent fuel dry storage area. See comment.

Storage part of facility **BNPD- WWMF**

The following shows storage status for waste classes and SRS.

Waste Class	Actual	Planned
HLW	Yes	No
ILW	Yes	No
LLW	Yes	No

List SRS?	No
List UMMT?	No

Capacity:	It can provide dry storage up to 750,000 fuel bundles or approximately 2,000 dry storage containers from Bruce NGS-A and Bruce NGS-B. WWMF typically receives ~600m ³ of L&ILW per month. Please see comment.

Site (Structure) : Pickering

Country: CANADA

Reporting Year: 2010

Facility:	PWMF
Description:	Pickering Waste Management Facility- Consists of the used fuel dry storage area and a storage area, called the re-tube components storage area (RCSA). It stores spent fuel generated at the Pickering A&B NGSs and ILW from re-tubing refurbishment project.

Storage part of facility PWMF

The following shows storage status for waste classes and SRS.

Waste Class	Actual	Planned
HLW	Yes	No
ILW	Yes	No
LLW	No	No

List SRS?	No
List UMMT?	No

Capacity:	The PWMF can store up to 650 dry storage containers or 249,600 fuel bundles in the two existing storage buildings. At the present, the RCSA consists of 34 loaded DSMs, two empty DSMs and empty space for 2 additional DSMs. Please see comment.
------------------	---

Types of Storage Units

Storage Unit Name	Type Name	Year Opened	Closed?	Full?	Modular?	Contains SRS?
RCSA	not in list	0	Yes	No	No	No
Used Fuel	not in list	1996	No	No	No	No

Comment **# 20141: Storage Facility PWMF**

An application to expand the facility has been approved for construction & would increase storage capacity of 1,000 dry storage containers. It is expected that the PWMF will be in operation until at least 10 years after the shutdown of the last Pickering reactor unit.

The RCSA prevents the pooling of rainwater and provides a low-maintenance surface. A drainage system directs the runoff water from the storage area to the Pickering NGS-B outfall. Catch basins permit the periodic sampling of the water.

Milestones

Country: CANADA

Reporting Year: 2010

Start Year or Reference Year:	2006	End Year:	2011
Description of Milestone:			
Initiation of the Nuclear Legacy Liabilities Program (NLLP), a 5-year start-up phase of a long-term, 70-year strategy to deal with the nuclear legacy liabilities. The Government of Canada had committed \$520 million to fund this program. The 5-year start-up phase is directed at addressing immediate health, safety, and environmental priorities, accelerating the decontamination and demolition of shutdown buildings, laying the groundwork for subsequent phases of the strategy, and continuing necessary care and maintenance activities. Also, the long-term strategy will be further developed and refined, and public consultations are planned to inform this work and decisions on the next phase of the strategy			
Start Year or Reference Year:	2002	End Year:	
Description of Milestone:			
Entry into force of the Nuclear Fuel Waste Act - Report submitted to the federal government in November 2005.			
Start Year or Reference Year:	2000	End Year:	
Description of Milestone:			
Entry into force of the Canadian Nuclear Safety Control Act and related regulations

Geological Considerations for Siting a Repository for Underground Disposal of High-Level Radioactive Waste. Regulatory Policy document of the Canadian Nuclear Safety Commission, September 1987.	
Comment # 9821: Policy Framework for Radioactive Waste	
Radioactive waste policy framework that will guide Canada's approach for radioactive waste disposal-1996 Natural Resources Canada	
Comment # 9822: G-320	
Draft guide of the Canadian Nuclear Safety Commission entitled "Assessing The Long Term Safety of Radioactive Waste Management" April 2005	

Strategies	(Yes;Partially;No)
Q15 Has your country developed strategies to implement a national policy?	Yes

Policies

Country: CANADA

Reporting Year: 2010

Requirements		(Yes;Partially;No)
Q17	identified the parties involved in the different steps of radioactive waste management	Yes
Q18	specified a rational set of safety, radiological and environmental protection objectives	Yes
Q19	implemented a mechanism to identify existing and anticipated radioactive wastes	Yes
Q20	implemented controls over radioactive waste generation	Yes
Q21	identified available methods and facilities to process, store and dispose of radioactive waste on an appropriate time-scale	Partially
Q22	taken into account interdependencies among all steps in radioactive waste generation and management	Yes
Q23	implemented appropriate research and development to support the operational and regulatory needs	Yes
Q24	implemented a funding structure and the allocation of resources that are essential for radioactive waste management	Yes
Q25	implemented formal mechanisms for disseminating information to the public and for public consultation	Yes

Comment # 7501: relevant legislation

These requirements are covered in federal legislation, the Nuclear Safety and Control Act, and regulations.

Responsibilities		(Complete;Incomplete)
Q28	establish and implement a legal framework for the management of radioactive waste	Complete
Q29	establish or designate a regulatory body that has the responsibility for carrying out the regulatory function with regard to safety and the protection of human health and the environment.	Complete
Q30	define the responsibilities of waste generators and operators of waste management facilities	Complete
Q31	provide for adequate resources	Complete
Q33	enforce compliance with regulatory requirements	Complete
Q34	implement the licensing process	Complete
Q35	advise the government	Complete
Q37	identify an acceptable destination for the radioactive waste	Complete
Q114	comply with legal requirements	Complete

Policies

Country: CANADA

Reporting Year: 2010

Activities		(Yes;Partially;No)
Q43	perform safety and environmental impact assessments for radioactive waste management facilities	Yes
Q44	ensure adequate radiation protection for workers, the general public and the environment	Yes
Q45	ensure suitable staff, equipment, facilities, training and operating procedures are available to perform the safe radioactive waste management steps	Yes
Q46	establish and implement a quality assurance programme for the radioactive waste generated or its processing, storage and disposal	Yes
Q47	establish and keep records of appropriate information regarding the generation, processing, storage and disposal of radioactive waste, including an inventory of radioactive waste	Yes
Q48	provide surveillance and control of activities involving radioactive waste as required by the regulatory body	Yes
Q49	collect, analyze and, as appropriate, share operational experience to ensure continued safety improvements in radioactive waste management	Yes
Q50	conduct or otherwise ensure appropriate research and development to support operational needs in radioactive waste management	Yes
Clearance		(Yes;No)
Q128	Does your country have "clearly defined clearance levels based on radiological criteria, with policy statements that material below those levels can be recycled or disposed of with non-radioactive wastes"?	No
Q129	Has your country ever used a "case-by-case" approach to clearing radioactive wastes (excluding spent/disused sealed radioactive sources)?	Yes
Q130	Has your country ever used clearance levels to dispose of, reuse or recycle radioactive waste as non-radioactive waste or as a non-radioactive resource (excluding spent/disused sealed radioactive sources)?	No

Policies

Country: CANADA

Reporting Year: 2010

Disposal Facilities

Licensing		(Yes - All;Yes - Some;No)
Q53	Environmental Assessment (EA)	Yes - All
Q54	Environmental Impact Statement (EIS)	Yes - All
Q55	Performance Assessment (PA)	Yes - All
Q56	Quality Assurance (QA)	Yes - All
Q57	Safety Assessment (SA)	Yes - All
Q59	If Quality Assurance is part of your Country's current, waste disposal facility licensing policy, does the QA Program conform to international standards (such as the ISO9000 series)?	Yes - All
Operation		(Yes - All;Yes - Some;No)
Q60	Does your Country have formal, documented waste acceptance criteria for its operating or proposed disposal facilities?	Yes - All
Post-Closure		(Yes;No)
Q61	Does your Country have any written policies to address the maintenance of records that describe the design, location and inventory of waste disposal facilities?	Yes
Q62	If the answer to the previous question was YES, does your Country have any policies, laws or regulations that prescribe what records are to be maintained?	Yes
Q63	Does your Country have any written policies to address active institutional controls or passive institutional controls, such as monitoring or access restrictions?	Yes
Q65	access restrictions	Yes
Q66	drainage and/or leachate collection system(s)	Yes
Q67	leachate treatment systems	Yes
Q68	environmental monitoring	Yes
Q69	facility monitoring	Yes
Q70	surveillance	Yes
Q71	plans for intervention measures during active institutional control if there is an unplanned release of radioactive materials from the disposal facility	Yes

Comment **# 7502: specification in licenses**

These requirements are generally noted in the General Nuclear Safety Regulations and are specifically addressed in each individual licence for a waste management facility.

Policies

Country: CANADA

Reporting Year: 2010

Processing/Storage

Policies/Procedures		(Yes;No)
Q73	waste sorting/segregation	No
Q74	waste minimization	No
Q75	waste storage	Yes
Q76	processing and/or storing and/or disposing of nuclear fuel cycle waste separately from non-nuclear fuel cycle waste (also known as nuclear applications waste)	No
Q78	Does your country have any legislation, regulation, or policy that waste processing must take place prior to storage (see following note)	No
Implementation		(Yes;No)
Q80	In your Country are there any waste processing facilities at the same location where the waste is generated?	Yes
Q81	In your Country are there any centralized waste processing facilities?	Yes
Q82	In your Country are there any mobile waste processing facilities?	No
Foreign		(Yes;No)
Q121	Has your country sent any wastes or spent fuel to another country for processing (reprocessing for fuel)?	No
Q124	Has your country accepted any wastes or spent fuel from another country for processing (reprocessing for fuel)?	No

Policies

Country: CANADA

Reporting Year: 2010

Spent/Disused SRS

Registration		(Yes;No)
Q84	Is there a national level registry?	Yes
Q85	If answer was yes, is the registry used only for disused/spent SRS?	No
Q87	Are there regional-level registries (one or more)?	No
Q90	Are there local-level registries (one or more)?	No
Procedures		(Yes;No)
Q91	Does your Country have documented procedures in place to ensure that sealed radioactive sources (SRS) are transferred to secure facilities in a timely manner after their user declares them to be spent?	Yes
Agreements		(Yes;No)
Q93	Government to Government agreements	No
Q94	Government - Supplier agreements	No
Q95	Supplier-User agreements	Yes
Q97	Do any agreements include suppliers that are outside of your Country?	Yes
Release / Disposal		(Yes;No)
Q99	Does your Country have any regulations to free-release spent sealed radioactive sources (SRS)?	Yes
Q100	Has your Country disposed of spent SRS in existing disposal facilities for LILW or HLW waste?	Yes
Q101	Does your Country plan to dispose of spent SRS in existing or planned disposal facilities for LILW or HLW waste?	Yes
Q102	Has your Country implemented dedicated disposal facilities for spent SRS?	No
Q103	Does your Country have plans to implement dedicated disposal facilities for spent SRS?	No

Comment **# 7504: federal regulations**

Federal regulations cover release and disposal of all radioactive materials: General Nuclear Safety and Control Regulations and the Radiation Protection Regulations.

Country: CANADA

Reporting Year: 2010

Import-Export**Radioactive Waste****(Yes;No)**

Q104 Does your Country have laws or Regulations restricting either the import or export of radioactive waste (excluding spent fuel)? Yes

Comment **# 7492: Import-Export**

Nuclear Non-Proliferation Import and Export Control Regulations made pursuant to the Canadian Nuclear Safety and Control Act. Administered by the Canadian Nuclear Safety Commission.

Spent Fuel**(Yes;No)**

Q105 Does your Country have laws or Regulations restricting either the import or export of spent fuel? Yes

Comment **# 7503: relevant regulations**

Federal regulations made pursuant to legislation: Nuclear Non-Proliferation Import and Export Control Regulations

Liquid HLW**Storage****(Yes;No)**

Q106 Does your Country have high-level liquid wastes in storage? Yes

Processing**(Yes - All;Yes - Some;No)**

Q107 If your Country has high-level liquid wastes in storage, are there documented plans in place to process these liquids? No

Timeframe**(Yes - All;Yes - Some;No)**

Q108 If your Country has high-level liquid wastes in storage, are there plans to have this waste be processed within a specified time frame? No

UMMT**Responsibility****(Yes;No)**

Q110 Does your Country have any Uranium Mine and Mill Tailings sites that do not have a designated authority to manage them? No

Policies

Country: CANADA

Reporting Year: 2010

Decommissioning**Funding****(Yes - All;Yes - Some;No)**

Q111 Does your Country require that funds should be set aside in support of future waste management activities, such as decommissioning activities? Yes - Some

Facilities**(Yes;No)**

Q119 Does Your Country have any nuclear fuel cycle facilities? Yes

Q120 Does Your Country have any nuclear applications facilities (non fuel cycle facilities)? Yes

Timeframe**(Yes - All;Yes - Some;No)**

Q112 Does your Country require a time frame for the decommissioning of nuclear fuel cycle facilities once these facilities cease operation? Yes - All

Q113 Does your Country require a time frame for the decommissioning of non-nuclear fuel cycle facilities once these facilities cease operation? Yes - All
