Waste Classification Schemes

Country: SWITZERLAND

Reporting Year: 2011

Waste Class Matrix: **IAEA Def.**

This country does use the IAEA Scheme: No

Description: The Agency's standard matrix

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
VLLW	100.0	0.0	0.0	0.0
LLW	0.0	100.0	0.0	0.0
ILW	0.0	0.0	100.0	0.0
HLW	0.0	0.0	0.0	100.0

Waste Class Matrix: **NEA-SD**

Yes

Description: Classification scheme used by IAEA to report on Swiss waste disposed of by OECD/NEA sea dumping campaigns in the Atlantic Ocean between 1969 and 1982 (IAEA-TECDOC-1105 [August 1999], Annex A.11).

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
MD	0.0	100.0	0.0	0.0
MDLC	0.0	89.0	11.0	0.0

Comment **# 361: Waste class MD**

MD (200-l metal drums), nominal volume 0.21 m3, include solidified (generally: cemented) waste. They are assumed to be LLW.

Comment **# 362: Waste class MDLC**

MDLC (metal drums lined with concrete) represent concrete containers (nominal volume 0.98 m3) into which either a 200-l drum with cemented waste (standard case) or scrap (exception) have been grouted before shipment. Overpacking purposes are shielding (gamma emitters) and enhanced safety (alpha emitters, including Ra-226). Volume distribution over LLW and ILW is estimated on the basis of the alpha activities processed (AGNEB-165 [28.04.1983], table 1), the numbers of dumped MDLC (IAEA-TECDOC-1105 [1999], Annex A.11), and the assumption of a 50% use of the LDC limits on specific activities for Ra-226 and other alpha emitters (AGNEB-165 [28.04.1983], p.4).

Waste Classification Schemes

Country: SWITZERLAND

Reporting Year: 2011

Waste Class Matrix: **KEV 2004**

Yes

Description: Generic, disposal-oriented waste classification scheme as defined in Article 51 of the Swiss Nuclear Energy Ordinance (KEV) dated 2004-12-10.

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
SMA	15.5	84.2	0.3	0.0
ATA	0.0	0.0	100.0	0.0
HAA	0.0	0.0	0.0	100.0
SMA ybc	0.4	98.8	0.8	0.0
ATA ybc	0.0	0.0	100.0	0.0

Comment **# 20681: Definition of KEV 2004 classes**

a) HAA (acronym for "hochaktive Abfälle"): spent fuel elements (when assigned as waste) and vitrified high-level liquid waste from reprocessing of spent fuel. b) ATA ("alphatoxische Abfälle"): radioactive waste not classified as HAA, with total alpha activity above 20 kBq per g of conditioned waste. c) SMA ("schwach- und mittelaktive Abfälle"): radioactive waste not classified as HAA or ATA. As the criterion for discrimination between ATA and SMA is strictly applicable to conditioned waste (i.e. waste packages ready for storage) only, two additional classes "ATA ybc" and "SMA ybc" are introduced for a tentative ranking of waste "yet to be conditioned".

Comment **# 20682: Derivation of Matrix Coefficients**

Waste accounting entities (such as a waste package) are allocated in parallel to classification systems A (here: the national system "KEV 2004") and B (here: IAEA reference system), based on system specific criteria (here: see attachment, Tables 2/3 and 6/7, respectively). Based on the volume associated with each waste accounting entity, the following parameters are calculated: 1) the total volumes for any couple of A/B classes, 2) the total volumes for any A class. Matrix coefficients are derived by dividing the total volume of any A/B couple through the total volume of the pertinent A class.

Attachment **#1877: Waste Matrix**

Derivation WasteMatrix KEV 2004 2010-02-13.pdf

Outline on Derivation of the NEWMDB Waste Class Matrix "KEV 2004".

Definition of «unprocessed waste» and «processed waste»:

This country uses the following definitions:

	as-generated waste	processed for handling	processed for storage	processed for disposal
Unprocessed means:	x	x		
Processed means:			x	x

Comment **# 12140: Definitions for Unprocessed and Processed Waste**

In reporting on Swiss radioactive waste, information is quite commonly, e.g. in the case of the Joint Convention Report, discriminated by a waste processing status qualifier, "conditioned" or "yet to be conditioned".

The status "conditioned" refers to waste which has been formally accepted by the pertinent authority as meeting the following general principle: "Radioactive waste shall be conditioned in such a way that the resulting waste forms, together with the packaging elements permanently tied to them, can be submitted to the waste management stages of transport, storage and disposal, without any further intrusive action, overpackaging measures remaining admissible".

The complementary status "yet to be conditioned" logically applies to all waste not fully complying with this principle.

In order to carry the reference information unambiguously forward to NEWMDB, the national terms "conditioned" and "yet to be conditioned" have been simply equalled to NEWMDB terms "processed" and "unprocessed", respectively. Hence, data given for "processed waste" in NEWMDB in fact relate to waste considered as being ready for storage and, intentionally, suitable for disposal.

Groups Overview

Country: SWITZERLAND

Reporting Year: 2011

Reporting Group:	BAG
Inventory Reporting Date:	December 2011
Waste Matrix Used:	KEV 2004
Description:	Wastes from Nuclear Applications in Medicine, Industry and Research Held under BAG's Supervision

Site Name	Facility Name	Facilities Defined		
CERN	WMF@CERN	processing	storage	
PSI(BAG)	WMF@PSI-W	processing	storage	

Comment **# 7226: General**

The Federal Office of Health (BAG) is the supervisory body for radwaste management activities at sites which do not fall under nuclear regulation in a legal sense [note: those are supervised by the Swiss Federal Nuclear Safety Inspectorate (ENSI)], dealing with a broad variety of waste producers in the field of nuclear applications in medicine, industry and research.

Waste arisings destined to disposal in a nuclear repository are

(a) collected on behalf of BAG (possibly after pretreatment, subject to fee) and routed to a national delivery point (PSI-East), where they are conditioned and stored under ENSI's supervision (see: Reporting Group "ENSI") - standard procedure for small producers, option for large nuclear research centres (CERN, PSI outside ENSI's supervision), or

(b) storage after/without treatment or conditioning at site - standard procedure for large-sized decommissioning wastes of large nuclear research centres.

BAG has no legal obligation for public reporting on wastes falling under (b) [note: category (a) is included under reporting for PSI(ENSI)]. Hence, information given is restricted to some qualitative issues.

Note, however, that registration of wastes of category (b) into the database system for Swiss radioactive wastes (ISRAM) has been accepted by PSI and CERN and is being implemented.

Groups Overview

Country: SWITZERLAND

Reporting Year: 2011

Reporting Group:	ENSI
Inventory Reporting Date:	December 2011
Waste Matrix Used:	KEV 2004
Description:	Wastes from Swiss nuclear power industry, research reactors and other nuclear installations (including the national collection centre for Federal wastes at PSI-East) held under ENSI's supervision

Site Name	Facility Name	Facilities Defined		
KKB	WMF@KKB	processing	storage	
KKG	WMF@KKG	processing	storage	
KKL	WMF@KKL	processing	storage	
KKM	WMF@KKM	processing	storage	
PSI(ENSI)	WMF@PSI-E	processing	storage	
ZWILAG	WMF@ZWILAG	processing	storage	

Comment **# 373: Reference Data for Reporting to NEWMDB**

Reporting relies on an evaluation of electronic data extracted from the database system ISRAM (Information System on Radioactive Materials), referring to site-specific waste inventories at key date 2009-12-31.

Comment **# 374: Reporting on NPP sites**

Reporting on NPP sites (KKB, KKG, KKL, KKM) is based on the following concept: (a) information on local waste management facilities is given collectively under "WMF@KKX", (b) waste data are presented for each site in terms of a generic "overall" storage unit (named "all@KKX"), (c) the start of both treatment/conditioning and storage operations is generically set equal to the first year of commercial operation of the NPP, and (d) the type of the "overall" storage unit is defined as "various" due to effective or potential variations within the set of locally available storage units [note: conditioned waste and solid waste yet to be conditioned are usually stored in buildings or bunkers, liquids or sludges awaiting treatment in tanks].

Comment **# 378: Reporting on PSI(ENSI)**

Reporting on PSI(ENSI) is based on the following concept: (a) information on local waste management facilities is given collectively under "WMF@PSI-E", (b) waste data are presented in terms of a generic "overall" storage unit (named "all@PSI-E"), (c) the start of both treatment/conditioning and storage operations is generically set equal to the first year of operation of PSI-East, and (d) the type of the "overall" storage unit is defined as "various" due to effective or potential variations within the set of locally available storage units [note: conditioned waste and solid waste yet to be conditioned are usually stored in buildings or bunkers, liquids or sludges awaiting treatment in tanks].

Comment **# 7224: Reporting on ZWILAG**

Reporting on ZWILAG, the central Swiss waste management facility owned by the 4 Swiss NPP, is based on the following concept: (a) information on local waste management facilities is given collectively under "WMF@ZWILAG" with the active storage units (Buildings H, M and further summarized under "others") being identified for comprehensiveness, (b) waste data are presented collectively for the site, (c) the start of both treatment/conditioning and storage operations is indicated as known. [note: vitrified HLW from reprocessing is stored in heavy transport/storage casks at Building H, other conditioned waste or solid waste yet to be conditioned are usually stored in buildings or bunkers, liquids or sludges awaiting treatment in tanks]

Comment **# 7225: Reporting on Storage Capacities**

Individual statements on site-specific storage capacities are omitted. As NPPs can use the large storage capacity of ZWILAG, problems with NPP waste storage are not expected to occur. At PSI-East, a need for increased capacity could be solved in time by adding further storage buildings or by use of ZWILAG storage capacity.

Groups Overview

Country: SWITZERLAND

Reporting Year: 2011

Reporting Group:	Foreign
Inventory Reporting Date:	December 2011
Waste Matrix Used:	KEV 2004
Description:	Swiss wastes stored outside Switzerland

Site Name	Facility Name	Facilities Defined		
ForeignRP	BNFL	processing		
	Cogema	processing		

Comment **# 7229: General**

All Swiss NPP's have current service contracts with BNFL (United Kingdom) and COGEMA (France) for the reprocessing of a qualified amount of spent fuel. These are subject to a return-of-waste clause which is exercised by both reprocessors.

Reprocessing wastes to be returned include, in both cases, vitrified HLW and a spectrum of LILW types which have been or are to be submitted to acceptance procedures in Switzerland (as well as in other countries concerned).

Known are the fuel deliveries (fuel assembly types, fuel masses, burnups) from [not reported in NEWMDB] and the waste returns to Switzerland [reported under site "ZWILAG"], up to the key date.

The overall amount of waste expected to be returned to Switzerland is known but not finalized, hence volumes are not reported.

Reporting Group:	NEA-SD
Inventory Reporting Date:	December 2011
Waste Matrix Used:	NEA-SD
Description:	OECD/NEA sea dumping

Site Name	Facility Name	Facilities Defined		
N-Atlantic	Sea Floor			disposal

Comment **# 372: Waste volumes**

See IAEA-TECDOC-1105 (August 1999), Annex A.11.

Site (Structure) : CERN

Country: SWITZERLAND

Reporting Year: 2011

Full Name: Centre Européen pour la Recherche Nucléaire

Description:

Official Website:

License Holder(s): "Not licensed as a nuclear facility" / Organisation Européenne pour la Recherche Nucléaire

Comment # 7294: CERN Wastes

CERN is located at the Swiss/French border, extending into both countries, and has the status a international research facility. Radwastes arise from operation and decommissioning of accelerators and experimental equipment. There is a general understanding that these wastes will be routed to disposal within the two host countries, but final decisions have not been made.

A small fraction of "Swiss" wastes, e.g. incinerable waste, is traditionally routed to the national delivery point (PSI-East) for treatment, conditioning and subsequent storage.

The remaining wastes, e.g. large-sized decommissioning waste, are stacked, partially after pretreatment, at dedicated CERN buildings, awaiting free release or conditioning. A project aiming at characterizing and inventorying pertinent wastes according to ENSI (formerly HSK) standards has been launched in 2003, in order to meet potential requirements for subsequent disposal in a Swiss repository and to evaluate optimized conditioning methods.

Potential waste arisings for disposal in Switzerland are estimated to be in the order of 10,000 -20,000 m3 (conditioned) SMA.

Comment **# 7296: PSI(BAG) Wastes**

Wastes arising from decommissioning of accelerators and experimental equipment at PSI-West are, normally, not routed to the national delivery point at PSI-East. Instead, they are conditioned by grouting in large concrete containers which are used afterwards as shielding elements at site.

Due to their functionality, such waste-containing shielding elements are not (yet) waste in a legal sense, and any reference to "storage units" at PSI-West must be related to that aspect.

Expected overall volume for conditioned waste is around 10,000 m3 SMA.

Comment **# 9721: ZWILAG Plasma Arc Incinerator/Melter**

Facility designed to incinerate/decompose/melt mixed waste (organics, metals, inorganics) fed in drums by very high temperature treatment.. Primary process residues are molten slag (non-metallic residues immersed into molten glass) and molten metals. These are casted into 145 l moulds. After waste product solidification by cooling, the moulds are overpacked in 200 l drums. Active commissioning of the facility has started in November 2004. Until the end of 2008, 587 drums have been produced within 9 test campaigns. Definitive license for facility operation was given by ENSI in September 2009.

Milestones

Country: SWITZERLAND

Reporting Year: 2011

Start Year or Reference Year:	2004	End Year:	
Description of Milestone:			
Sectoral Plan (Sachplan) for deep geological repositories			

Comment **# 24264: General**

Tool elaborated, as required by the new Nuclear Energy Ordinance (KEV), by the Federal Office of Energy (a) to settle safety-related and other criteria relevant to the selection of regions and sites, (b) to define the procedure on how to designate sites from candidate regions. Key intentions are to present transparent technical and procedural rules for the site selection process and to implement public involvement. Draft versions of the strategic part have been submitted to commenting by involved bodies in 2006 and 2007. Its final version has been released by the Federal Council on April 2, 2008. The procedure is split into three subsequent phases. In Phase 1, potentially suitable geological regions are to be identified, qualified and accepted for further consideration. Phase 2 is focussed on selecting at least two candidate sites for each repository. Such sites shall be investigated in detail in Phase 3, before license applications for selected sites.

Comment **# 25650: Phase 1 (2008-2011)**

In October 2008, Nagra submits a waste management programme and a proposal on 6 and 3 candidate regions for deep geologic disposal of LILW-SL (SMA) and SF/HLW/LILW-LL (LMA/HAA), respectively. ENSI basically accepts Nagra's proposals early in 2010. The final summary report for Phase 1 is accepted by the Federal Government in November 2011: all of the identified candidate regions can be carried over into Phase 2, and Phase 2 can be launched.

Comment **# 25651: Phase 2 (2011-)**

In March 2011, ENSI accepts Nagra's proposal on site investigations specifically related to Phase 2. In December 2011, Nagra submits first proposals on candidate sites for surface facilities, as a basis for public discussion. The procedure is going on according to plan.

Start Year or Reference Year:	2002	End Year:	2006
Description of Milestone:			
Project Entsorgungsnachweis 02			

Comment **# 24263:**

Completion of the feasibility study for a SF/HLW/LILW-LL repository (EL-HAA/LMA), as requested by the issue of Project Gewaehr in 1988, based on Opalinus clay host rock formation in Northern Switzerland (Zürcher Weinland). Report was submitted by Nagra to the Federal Government by end of 2002. At the same time, Nagra asked the Federal Government to agree to Nagra's proposal to focus future investigations for the Swiss SF/HLW/LILW-LL programme on the Opalinus clay and the candidate siting area of the Zürcher Weinland. After review of Nagra's Technical documentation by national and international expert teams, the Federal Council approves the Entsorgungsnachweis on June 28, 2006. Focussing investigations on the proposed potential region was, however, disapproved.

Start Year or Reference Year:	1996	End Year:	2003
Description of Milestone:			
Candidate site "Wellenberg" for a LILW-SL repository (Stage 2)			

Comment **# 24262:**

Despite decisions on a stepwise concession approach (first only exploratory drift, then repository), project modifications (monitoring, retrievability) and definition of exclusion criteria: negative outcome of a new cantonal vote on mining concession for an exploratory drift in September 2002. The project is abandoned by the potential operator company GNW, which is formally disbanded in 2003 after completion of recultivation and settlement of further obligations.

Milestones

Country: SWITZERLAND

Reporting Year: 2011

Start Year or Reference Year:	1993	End Year:	1995
Description of Milestone:			
Candidate site "Wellenberg" for a LILW-SL repository (Stage 1)			

Comment # 24261:

Wellenberg identified by Nagra as candidate site for a LILW-SL repository ("EL-SMA") after a 12 years' site evaluation procedure (1993), agreement with local community (1994), applications for general licence (federal) and mining concession (cantonal) for exploratory drift and repository in 1994, mining concession being rejected by public referendum in June 1995.

Start Year or Reference Year:	1990	End Year:	1992
Description of Milestone:			
Electronic Waste Management Database			

Comment # 24260:

Implementation of a standardized, decentralized computer-based database system for Swiss radioactive waste (ISRAM), which enables characterization and book-keeping for all conditioned and most of unconditioned waste packages.

Start Year or Reference Year:	1988	End Year:	2004
Description of Milestone:			
ZWILAG			

Comment # 24259:

Planning, construction and commissioning of a central storage facility (ZWILAG) at Würenlingen for spent fuel, HLW and any other type of waste, with conditioning facilities and plasma arc incinerator/melter.

Start Year or Reference Year:	1985	End Year:	1988
Description of Milestone:			
Project Gewaehr 85			

Comment # 24258:

Reports submitted by Nagra in 1985, based on a concept with two repositories (EL-SMA for short-lived LILW; EL-HAA/LMA for HLW, spent fuel and long-lived LILW). Decision of Federal Government in June 1988: demonstration for EL-SMA accepted, for EL-HAA/LMA (crystalline host rock) safety concept and engineering feasibility accepted, but siting feasibility yet to be demonstrated.

Start Year or Reference Year:	1982	End Year:	1982
Description of Milestone:			
Last OECD/NEA sea dumping campaign in the Northern Atlantic Ocean.			

Comment # 24257:

Dumping of Swiss LILW stopped in 1983, formal disclaimer for a continued use of this disposal option by Swiss Government in 1994.

Milestones

Country: SWITZERLAND

Reporting Year: 2011

Start Year or Reference Year:	1978	End Year:	1978
Description of Milestone:			
Feasibility demonstration for geological disposal of HLW in Switzerland			

Comment **# 24256:**

Nagra report submitted to and accepted by authorities. Issue: Nagra has to demonstrate feasibility for disposal of all waste categories (HLW, ILW and LLW) taking account of progress in R&D, until 1985.

Start Year or Reference Year:	1972	End Year:	1972
Description of Milestone:			
Founding of Nagra			

Comment **# 24255:**

Nagra, the National Cooperative for the Disposal of Radioactive Waste, has been founded in 1972 as a private organization in order to manage the task of finding and planning Swiss radwaste repositories. Shareholders are the Swiss nuclear power industry and the Swiss Confederation (on account of waste arisings from nuclear applications in medicine, industry and research).
