## Waste Classification Schemes

Country: UNITED KINGDOM

Reporting Year: 2013

Waste Class Matrix: **IAEA Def.**

This country does use the IAEA Scheme: No

Description: The Agency's standard matrix

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
VLLW	100.0	0.0	0.0	0.0
LLW	0.0	100.0	0.0	0.0
ILW	0.0	0.0	100.0	0.0
HLW	0.0	0.0	0.0	100.0

Waste Class Matrix: **UK Classes**

Yes

Description: The categorisation of Radioactive Waste in the UK includes:  
 VLLW: Very Low Level Waste  
 LLW: Low Level Waste  
 ILW: Intermediate Level Waste  
 HLW: High Level Waste  
 Spent fuel is not categorised as waste, while the option of reprocessing it remains open and a future use for the fuel can be foreseen.

Waste Class Name	Distribution %			
	VLLW	LLW	ILW	HLW
VLLW	100.0	0.0	0.0	0.0
LLW	0.0	100.0	0.0	0.0

HLW	0.0	0.0	0.0	100.0

Comment **# 12246: Waste Matrix UK Classes**

## CATEGORISATION OF RADIOACTIVE WASTE IN THE UK

VLLW: Wastes which can be disposed of with ordinary refuse, each 0.1 cubic metre (m<sup>3</sup>) of material containing less than 400 kilobecquerels (kBq) of beta/gamma activity or single items containing less than 40 kBq. These wastes are not reported to the NEWMDB.

LLW: Wastes other than those suitable for disposal with ordinary refuse, but not exceeding 4 gigabecquerels per tonne (GBq/te) of alpha or 12 gigabecquerels per tonne (GBq/te) of beta/gamma activity

ILW: Wastes with radioactivity levels exceeding the upper boundaries for LLW, but which do not need self-heating to be taken into account in the design of storage or disposal facilities

HLW: Wastes in which the temperature may rise significantly as a result of their radioactivity, so this factor has to be taken into account in designing storage or disposal facilities.

Comment **# 12247: Waste Matrix UK Classes**

The UK categorisation of radioactive waste does not contain categories for transitional waste that will decay within a short period of storage to unrestricted clearance levels, or for the division of ILW and LLW classifications into short-lived and long-lived LILW (Low and Intermediate Level Waste). Such a system would, theoretically, have the advantage of making it easier to identify appropriate management routes. However, although in principle it should be possible to construct and operate a system that makes allowance for reductions in radioactivity over time, most UK wastes contain a mixture of radionuclides of different half-lives making the operation of such a system problematic. Additionally, the dose resulting from contact with radionuclides is not related to their half-life and the toxicities of radionuclides of similar half-lives are not necessarily the same. Therefore, in the UK, the management of radioactive wastes is determined by the actual characteristics of the waste rather than by its classification

**Definition of «unprocessed waste» and «processed waste»:**
