

## Waste Management Infrastructure and Financing

Country: CROATIA

Reporting Year: 2013

### National Infrastructure

Nuclear Energy Context:	
Research & Development:	
Policies and Programs:	
Decommissioning and Dismantling:	
Legal Framework:	<p>In Croatia the issues related to the safety of spent fuel and radioactive waste management are almost entirely covered by the Act on Radiological and Nuclear Safety. The Act establishes measures for radiological safety, measures for physical protection and measures for nonproliferation of nuclear weapons in performing nuclear operations and operations involving sources of ionizing radiation. The goal is to ensure adequate protection of individuals, society and the environment against harmful effects of ionizing radiation, as well as to ensure safe performance of operations involving ionizing radiation sources, nuclear operations, radioactive waste management and physical protection of ionizing radiation sources and nuclear installations.</p> <p>State Office for Radiological and Nuclear Safety (SORNS) is the regulatory body entrusted with the implementation of the legislative and regulatory framework. The SORNS, as the state administration body, is the competent authority for all activities pertaining to radiological and nuclear safety, as well as for the activities pertaining to storage of radioactive waste and disused sources of domestic origin in the central national storage.</p>
Planned Improvements:	

### National Financing

Nuclear installations:	
Legacy Wastes:	
Medical installations:
