The Toshiba Training Reactor-1 (TTR-1) was permanently shut down in March 2001. The spent fuel was transported outside the laboratory, and the first and second phase dismantling work was completed at the end of February 2004. Some of the reactor equipments continue maintaining their performance, and waste materials generated from dismantling work are under the state of managed storage.

The NCA (critical assembly, 0.2kWth) is operational.

Waste Inventory
